

## About

Cruller Technologies is a IT consulting firm specializing in the needs of small and mid-size business. We have been in business since 1989 provided technical advice and services to the Central Virginia area. We offer scalable solutions to help businesses be more productive.

## Background

We were contacted by Leslie Hamlett, of the National Mail Handlers Union Local 305, in February of 2016 to provide IT services to the Richmond office. We have been providing a number of services such as; networking, security, email, consulting, setup of new equipment, transferring of data, etc.

## Findings

I was tasked with moving the old server data to the new server. We installed a new Mac Mini Server for interoffice file sharing and collaboration. I was able to move the shared folders from the old server to the new server successfully. When verifying the data had moved properly, I noticed that there was not a lot of recent data. There didn't seem to be much data from the past few years. There were a few files generated and accessed in the past few years, but not nearly as many, that would normally be there from normal use over that same time frame. I brought this to the attention of Leslie Hamlett and Flan Jackson, as I did find this odd. We wanted to verify that all the data had been copied and moved to the new server correctly.
